

INTERNSHIPS WITH ZIMMER AND PEACOCK

Zimmer and Peacock work with clients to develop and manufacture electrochemical sensor based technologies; through the supply of standard products or through the custom development and manufacture of electrochemical sensors, biosensors and medical diagnostics.

Intern experiences with us at ZP will combine molecular biology and engineering, with opportunities to work alongside other interns, as well as to work with and learn from more experienced employees. At ZP we have projects such as wearables for glucose sensing and COVID-19 related projects, all of which will provide great opportunities for interns to get involved.

'...I experienced very motivated colleagues and a positive and friendly environment where you are respected and able to work properly...'

Internships at ZP are the perfect opportunity for students, with options for different durations and flexible start dates. Students will be paid whilst participating in this internship and will receive help from ZP in finding accommodation for the duration of the placement. The internship will be based in ZP's facilities in Horten, on the western shore of the Oslo Fjord in Norway.
